DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Kasuya (US5930054).

Regarding claim 1, Kasuya discloses, in figure 1A, a position determining device for determining a position of a subject (11) movable within a predetermined movement range (), the position determining device comprising:

Art Unit: 2612

a relative position determiner (17) for determining a relative moving amount of the subject with respect to a reference point; and

an absolute position determiner (16) for determining an absolute position of the subject within the movement range (see col. 3, lines 49-67);

wherein the position determining device determines the position of the subject in accordance with data outputted from both of the relative position determiner and the absolute position determiner (see col. 3, lines 20-28).

Regarding claim 2, Kasuya discloses, in figure 1, the relative position determiner comprises an incremental rotary encoder (17) and a counter (20) for counting encode pulses outputted from the rotary encoder (see col. 3, lines 20-28); and

the absolute position determiner comprises a potentiometer (see col. 3, lines 20-28).

Regarding claim 3, Kasuya discloses the subject is a control member (11) of a lens control unit for controlling at least one of focus and zoom of a TV lens electrically (see col. 3, lines 3-5).

Regarding claim 4, see claim 1 above. In addition, Kasuya discloses determining the position of the subject in accordance with data outputted from the absolute position determiner before determining the position of the subject in accordance with data outputted from the relative position determiner (see col. 4, lines 24-31).

Regarding claim 5, see claim 2 above.

Regarding claim 6, see claim 3 above.

Application/Control Number: 09/273,726

Art Unit: 2612

Regarding claim 7, see claim 1 above. In addition, Kasuya discloses a storage device (18) for previously storing standard output data of the absolute position determiner corresponding to a plurality of positions of the subject within the moveable range, and previously storing standard output data of the relative position determiner corresponding to the standard output data of the absolute position determiner, the reference point for the standard output data of the relative position determiner being established at a limit of the movement range of the subject (see col. 3, lines 29-34; col. 4, lines 1-58 and col. 7, lines 11-20).

Regarding claim 8, see claim 7 above.

Regarding claim 9, see claim 2 above.

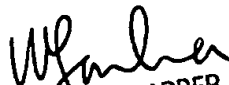

Regarding claim 10, see claim 3 above.
